## AWARD MESSAGE

Theyanesh has taken up BiEngine modulation and fine tuning process. There has been bigger challenge in BiEngine Module where it can not run more than 32 procedures recursively. He has come up with some architectural changes to the module with which now we can run as many as recursive procedures with in the BiEngine module. This has enabled customer to view critical measures on the UI which are very specific to the business to generate reports for Dental and Vision data. This change has not only refactored existing BiEngine process but also brought in many dimensions to create very complex measures w.r.t any subject areas with in AVRC eco system. Thank you very much for the innovation you have put in for making BiEngine accept more than 32 recursive procs there by allowing the dental and vision measures generated on the UI. Keep up the good work finding innovative ways to achieve this.
